SUMMARY

A motivated Application Development student completing a National Diploma at Durban University of Technology (DUT), with hands-on experience building full-stack applications using C#, ASP.NET Core MVC, and Azure cloud services. Actively integrates AI tools and prompt engineering into the development workflow to accelerate feature-building and optimize business logic across team projects. Comfortable learning fast, shipping consistently, and working in fast-paced, sprint-based team environments. Eager to bring strong technical curiosity, an output-first mindset, and a growing interest in agentic AI development workflows to an early-career engineering role.

PROFESSIONAL EXPERIENCE

Geeked-On x Tech Horizons IT Incubation Program

June 2026 –

July 2026

Durban , KZN

- **Enterprise Application Architecture:** Actively developing full-stack web applications utilizing the ASP.NET Core MVC framework and C#, ensuring strict adherence to architectural patterns and clean separation of concerns.
- **Database Management & Relational Design:** Architecting relational database structures in SQL Server; utilizing Entity Framework Core to configure database migrations and manage primary/foreign key navigation properties.
- **Modern DevOps & Collaboration:** Working within a sprint style team environment of six developers to build enterprise software from scratch for a Demo Day milestone; actively utilizing Git for version control and GitHub for repository management and team code merging.
- **AI-Driven Engineering Efficiency:** Actively used AI tools and prompt engineering methodologies to accelerate frontend UI construction and optimize backend business logic pipelines, reducing development time across a 6-member sprint team building an enterprise-grade web application from scratch for a public Demo Day milestone.

KZN Imbokodo Hackathon 2026 | Participant

- **Domain Research & Problem Definition:** Conducted user-centric research on menstrual equity and female entrepreneurship to define problem statements, buyer/seller personas, and B2B business models for local micro-enterprises.
- **Agile Prototyping & Architecture:** Designed system workflows and database models for **FlowBridge**—a Takealot-inspired B2B e-commerce platform built with ASP.NET Core MVC to connect female sanitary product manufacturers directly with institutional buyers (NGOs and schools).
- **Feature Logic & System Design:** Engineered backend logic for vendor inventory management, automated first-time buyer promotional rules (free delivery calculations), and a South African school locator tool for tracking donation impact.
- **Rapid Sprint Execution:** Participated in an intensive 24+ hour coding sprint, collaborating closely with teammates and industry mentors to deliver a full product pitch and system demonstration.

EDUCATION

Diploma in ICT : Application Development

Durban University of Technology

Jan 2024 –

Nov 2026

National Matric Certificate

J.G Zuma High School

Jan 2017 –

Nov 2021

SKILLS

Languages and Frameworks

- SQL
- C#
- ASP.NET MVC
- HTML

Databases

- SQL Server
- Azure Cosmos DB

Tools and Methodologies

- Github
- Technical Documentation (Use Cases)
- MVC Architecture

CERTIFICATES

FNB Academy 2025

Full Stack Development

Introduction to Cybersecurity

Cisco Networking Academy

PROJECTS

Student Management System

Technologies Used: C#, ASP.NET  Core MVC, .NET 8, Microsoft Azure, Azure Cosmos DB, Azure Blob Storage, OAuth 2.0

- Worked collaboratively in a group to build a full-stack Student Management System deployed on Microsoft Azure using ASP.NET  Core MVC and .NET 8.
- Implemented OAuth 2.0 authentication with GitHub and Google, with Role-Based Access Control (RBAC) restricting system access exclusively to users on the admin allowlist, preventing unauthorized login attempts.
- Implemented complete CRUD operations for managing student records.
- Enhanced cloud security by storing profile pictures in Azure Blob Storage secured with time-limited Shared Access Signature (SAS) tokens, and student text data in Azure Cosmos DB.

Security Management System(Pirana Guarding)

- Technologies Used: C#, ASP.NET  MVC, SQL Server, CSS
- Worked collaboratively in a group to develop a web-based security management system for Pirana Guarding, supporting up to 12 guards per site with secure check-in and check-out functionality.
- Implemented roster-based access control, validating each guard's scheduled shift before allowing check-in/check-out, guards marked off-duty on a given day are automatically restricted from logging in or out.
- Implemented an anti-fraud mechanism by integrating a unique QR code checkout system that changes daily to completely eliminate code reuse.
- Designed and engineered a real-time tracking architecture that logs each guard's name, date, and exact timestamp, updating attendance status instantaneously.
- Created a professional Director Dashboard to actively monitor live guard logs, track real-time attendance, and view critical field incident reports.

EcoRewards SA – Smart Recycling Rewards Web Application

Built a full-stack web application for eThekweni Municipality residents to submit recyclable waste and earn redeemable rewards, developed as part of a 6-member team in the Geeked-On x Tech Horizons ASP.NET ☞ Incubation Programme.

- Developed using C#, ASP.NET ☞ MVC (.NET Framework 4.8), Entity Framework 6, and SQL Server, following the Code First approach.
- Implemented role-based dashboards using ASP.NET ☞ Identity, supporting 3 distinct user roles with tailored views and permissions.
- Built recycling submission workflows allowing residents to log recyclable materials and track progress toward reward eligibility.
- Designed a rewards marketplace featuring redeemable items such as airtime, retail vouchers, and eco-friendly products, allowing residents to exchange earned points for rewards.
- Implemented collection event management functionality for scheduling and tracking municipal recycling collection events.
- Built PDF and Excel export functionality (using iTextSharp and EPPlus) allowing users to generate custom monthly/yearly reports on submissions, rewards, and collection data.
- Used Bootstrap 5 for responsive UI and Chart.js for data visualization dashboards (e.g. recycling trends, reward redemption stats).
- Presented the project to industry stakeholders including Geekulcha at the programme's Demo Day.
