SUMMARY

A learning-focused and motivated Application Development student completing a National Diploma at the Durban University of Technology (DUT). Passionate about backend software architecture, database management, and building data-driven desktop and web applications using C# and SQL Server. Possesses a strong logical foundation and practical experience designing full-stack projects using ASP.NET Core MVC and Azure Cosmos DB. Proven ability to thrive in professional learning environments through corporate exposure at the FNB Network Academy. Eager to leverage technical programming skills and a proactive problem-solving mindset within an enterprise technology environment.

EDUCATION

Diploma in ICT : Application Development 02/2024 – 11/2026
Durban University of Technology

National Certificate 01/2017 – 11/2021
J.G Zuma High School

SKILLS

Languages and Frameworks

- SQL
- C#
- ASP.NET CORE MVC

Databases

- SQL Server
- Azure Cosmos DB

Tools and Methodologies

- Github
- Figma

CERTIFICATES

FNB Academy
Full Stack Development

Introduction to Cybersecurity
Cisco Networking Academy

PROJECTS

Student Management System

Worked collaboratively in a group to build a full-stack Student Management System deployed on Microsoft Azure using ASP.NET Core MVC and .NET 8. Implemented OAuth 2.0 authentication with GitHub and Google, Role-Based Access Control (RBAC) for authorized access only, and complete CRUD operations for managing student records. Enhanced security by storing profile pictures in Azure Blob Storage with time-limited SAS tokens and student text data in Azure Cosmos DB.

Security Management System

Worked collaboratively in a group to develop a web-based security management system for Pirana Guarding that allows security guards to check in and out by scanning a unique QR code that changes daily to prevent code reuse. The system records each guard's name, date, and time of scan, and updates their attendance status in real time. Created a director dashboard that will monitor guard logs and also view incidents reported. Applied MVC architecture for organized code structure, SQL Server for data storage, and CSS styling for a professional interface suitable for a security company.
